Safety Light Curtains Accessories

Deviating Mirrors

By installing the safety light curtains by direct alignment, it is possible to cover a dangerous area. The **SRN** mirrors, placed in right position, allow to reflect the beams emitted by the light curtains and consequently can be used to control more contiguous sides of hazardous zones, as shown in the pictures sideways and below. It is important to take into consideration that the introduction of mirrors causes the decrease of the operating distance of the safety light curtains by 15% for each reflection. Where needed, the use of the LASP laser pointer is advisable to make easier the alignment procedure.

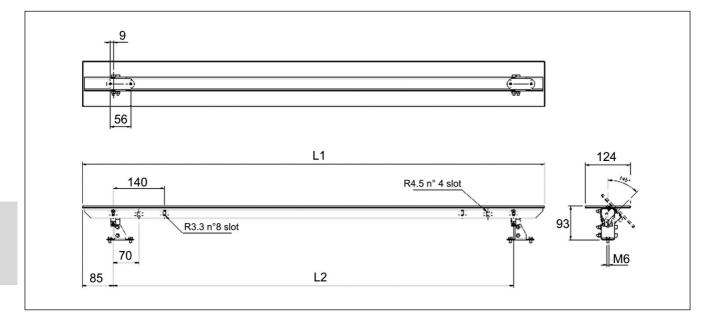

Deviating Mirror Series Dimensions

Type Selection

Item number	L1 (mm)	L2 (mm)
SRN-500		384
SRN-600	704	534
SRN-800	904	734
SRN-900	1004	834
SRN-1200	1234	1094
SRN-1500	1604	1434
SRN-1650	1804	1634

Connectors

M12 Shielded connectors to be used for wiring the safety light curtains. Connectors for emitter units are provided with 4 poles while the version dedicated to receiver units with 8 poles. Three standard cable lengths are given below, other lengths are available upon request.

Laser pointer

For all those applications where the alignment of the safety light curtains can be difficult as consequence of the long distance between the emitter and the receiver units or the adoption of one or more deviating mirrors to protect contiguous sides of a dangerous area, the **LASP** laser pointer can be used. By inserting the **LASP** laser

Floor stands

The floor stand of the SPT

series can be used for the

installation of both emitter

and receiver units of the SB2

and SB4 safety light curtains

series, as well as for the

SRN deviating mirror series.

Five versions with different

pointer in the upper part of the emitting unit (and then in the lower one), using one of the two side slots of the profile (refer to drawing), the right alignment can be easily achieved thanks to the visible indication.

The **LASP** laser pointer is powered by three 1.5 V LR-44 type batteries.

lengths are available in order

to satisfy all application

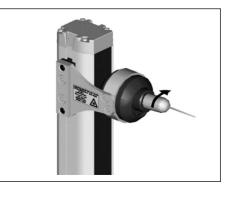

Where needed, the SPT floor

stand series can be also

equipped with protective

stands of the CPZ series.

needs.

Protective stands

The protective stands of the **CPZ** series can be mounted on the **SPT** floor stands by using two M6 x 10 screws, and relative washers and square nuts.

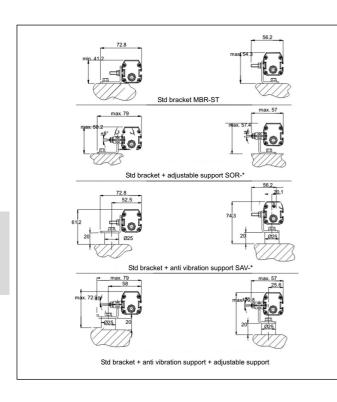

The **CPZ** series includes a complete range of protective stands in terms of different lengths, allowing to choose the right model for each safety light curtain.

Type Selection

Item number	Overall lenght L (mm)

Muting signalling lamp LSM

The **LSM** muting lamp must be used in order to signal properly when **SB2** or **SB4** safety light curtains are operated in partial or total muting mode. To avoid inappropriate and unsafe use of the muting function, if the lamp is not connected, the muting request causes the opening of the safety outputs and the device gets stopped due to lamp anomaly.

Brackets and supports

The model **MBR-ST** is the spare kit including four standard mounting brackets. The series **SOR-*** of adjustable mounting supports is used to allow the orientation of the safety light curtains in a range of \pm 5° with respect to the longitudinal axis, while the **SAV-*** version of supports is addressed to applications where the absorption of the vibrations caused by the machinery on which the safety light curtains are installed is necessary.
