Application notes

Application Note: January 2023

Industry: Energy and building efficiency

Product: UWP 4.0

Customer: ESCOs

Subject: Energy Management System integration

CUSTOMER ISSUE :

An ESCo needs a plug and play solution for monitoring energy consumption in up to 20 facilities of a large company.

OUR SOLUTION :

As the customer needs different energy analyzers for several locations and requirements, we can provide a full range of meters for main and sub metering to solve all kinds of installation issues in combination with the UWP 4.0, in order to push data to the ESCo's Energy Management System.

BENEFITS :

- By having a unique partner for the whole metering and communication chain, the ESCo could optimize its procedures and TCO, so providing a more competitive solution to their customers
- Secure remote access for set-up, maintenance and daily operation is possible by using MAIA Cloud software, so as to optimize response time and operational expenditures
