

FOR IMMEDIATE RELEASE:

**M12 Tripleshield™
Capacitive Sensors with
Teach-In Programming**

February 12, 2013 - Buffalo Grove, IL - Carlo Gavazzi is proud to announce our new and improved **CA12CLC Series** capacitive sensors with Tripleshield™ technology. The new design features a state of the art microprocessor which improves the overall accuracy and performance of the sensor.

The new **CA12CLC Series** also has several other improvements, including a simplified 'teach-in' programming process with a dynamic teach option, increased temperature stability and a standardized LED configuration. The new series also features all of the features that made the older series popular: extended sensing ranges, PNP/NPN auto-detect, high EMC protection, NO/NC selectable, and patented CARLO GAVAZZI Tripleshield™ technology, which provides one of the most reliable capacitive sensing technologies regardless of conditions.

The M12 barrel makes the sensor compact enough to fit in a variety of applications, while still being robust enough to survive most environments. The **CA12CLC Series** is well suited for applications in the plastic, rubber, glass, and ceramic industries, as well as in material handling and packaging applications.

The **CA12CLC Series** is available from CARLO GAVAZZI's North American network of sales offices and distributors, or at www.GavazziOnline.com.
