Solutions

Plastics Machinery
ABOUT CARLO GAVAZZI

Carlo Gavazzi Automation is a multinational electronics group active in designing, manufacturing and marketing electronic equipment targeted at the global markets of industrial and building automation.

Our history is full of firsts and our products are installed in a huge number of applications all over the world. With more than 80 years of successful operation, our experience is unparalleled.

We have our headquarters in Europe and numerous offices around the world.

Our R&D competence centres and production sites are located in Denmark, Italy, Lithuania, Malta and the People’s Republic of China.

We operate worldwide through 22 of our own sales companies and also selected representatives in more than 65 countries, from the United States in the West to the Pacific Rim in the East.

Our core competence in automation spans three product lines: Sensors, Switches and Controls.

Our wide array of products includes sensors, monitoring relays, timers, energy management systems, solid state relays, safety devices and fieldbus systems.

We focus our expertise on offering state-of-the-art product solutions in selected market segments.

Our customers include original equipment manufacturers of packaging machines, plastic-injection moulding machines, food and beverage production machines, conveying and material handling equipment, door and entrance control systems, lifts and escalators, as well as heating, ventilation and air-conditioning devices.
DESIGNED TO MEET MARKET REQUIREMENTS

The rising demand for processed food and beverages, followed by increasing requirements for packaging, is driving overall growth in plastics machinery applications. Accuracy, reliability and energy efficiency are becoming more and more important. Extrusion equipment has seen an interesting growth, with an increase in the demand for extruded goods. Injection moulding machines are used in a wide range of applications, ranging from automotive components to consumer goods. The production efficiency of machines for plastics has continuously increased over the last few decades. Appropriate temperature control is essential to ensure good quality of the final outcome. The thermal stability necessary in such machinery can only be achieved through the use of solid state relays (SSRs) which are capable of meeting the demands of fast heater switching. Carlo Gavazzi offers a comprehensive range of SSRs which feature back to back thyristors in combination with direct copper bonding technology for increased lifetime and reliable operation of the SSR.

Carlo Gavazzi’s patented Tripleshield™ capacitive sensors have become the standard all other manufacturers are measured against. Capacitive sensors will detect most materials, conductive and non conductive. This makes them ideal for level detection in raw plastic delivery systems. Carlo Gavazzi’s ultrasonic, photoelectric and inductive sensors are also used extensively in plastics machinery.

In order to protect the working area, ensuring the safety of operators and the safe operation of the machines, Carlo Gavazzi provides a range of safety modules to monitor the safe operation of the safety control circuits, light curtains, emergency stops and safety gates; included in product offering, we also provide for safety magnetic sensors.
Process stability is critical to ensure high product quality so stable temperatures are achieved by frequent switching. Carlo Gavazzi solid state switches provide extremely reliable solutions that permit the fast switching needed in these processes. The RGS1 series and RM1 series are 1-phase solid state solutions which can be mounted on a chassis or an external heatsink, whilst the RGC1 series is provided with an integrated heatsink, hence ready for use. The integrated over voltage protection and high surge current capability of Carlo Gavazzi SSRs ensure trouble free operation, preventing unnecessary machine stoppages which result in frequent scrap material and high downtime costs.

Real-time data from each solid state relay is accessible with the NRG series. This allows machine builders to make informed decisions, solve urgent problems at short notice and develop machines that are more autonomous. The capacitive sensors with IO-Link can be used in hoppers, dryers and dosers to detect the dielectric constant of the plastics and when a wrong material is used, the sensors give an alarm. The filling mode can be performed, without involving a PLC, just connecting two IO-Link sensors together and setting the logic functions.

Carlo Gavazzi’s safety modules can be used with safety light curtains, safety photo sensors, emergency stop buttons or safety magnetic switches. In plastics machines, the gates must often be opened under safety conditions: the SM or CM devices control the safe interruption of the safety circuit. For applications that require flexible safety logics or control of multiple safety circuits, we provide a modular and configurable safety control solution with the Certus series, that offers an intuitive configuration interface. Our range of safety modules are certified to the industry standards and rated: SIL+, SILc; 3, PL e and Cat.4; it offers intuitive and quick logical configuration software, easy to set-up tamper proof safety systems, and a reduction in components and wiring.
Consistency and repeatability of extruded parts can only be ensured if the temperature control process is stable with minimum deviations from set points. Deviations from temperature set points are limited by fast switching of heaters which can only be done through solid state relays. Carlo Gavazzi offers a wide range of solid state solutions for temperature control of the barrel zones. The RGC1, RGS1 and RM1 series are 1-phase solutions, whilst the RGC3 series provides 3-phase switching solutions. Additionally, the RG series utilises wire bonding technology that reduces the thermal stress of the solid state switch, guaranteeing extended lifetime over other SSRs. The RGC1S and RGC3..M versions integrate detection of malfunction of the load or the SSR, where an alarm output is readily available for immediate intervention. With the NRG solution, SSRs can be controlled via a fieldbus, hence reducing costs and installation time.

Measurements and diagnostic data is available in real-time and can be used to predict failures before they occur. Capacitive, photoelectric and ultrasonic sensors are used to detect any interruption in the extruded pipe. They ensure prompt intervention in the case of interruption and round-the-clock monitoring of the extrusion process.

In both injection machines and extrusion machines, Carlo Gavazzi’s switches and sensors ensure smooth and efficient production processes. Capacitive sensors in particular are widely used in silos.
Reliable thermal process control is key in determining the quality of the final outcome in blow moulding. An accurate thermal process can only be guaranteed by continuous monitoring of the load and system parameters. The RGC1A..M solid state relay integrates monitoring to identify load failures in a timely manner in order to eliminate scrap. The RGC1S series is an up-scaled solution to the RGC1A..M since it integrates current monitoring for malfunction detection and so is able to additionally detect variations in load current versus a Teached set point. In both the RGC1A..M and RGC1S, the failure detection is reactive.

The NRG solution, consisting of solid state relays that integrate monitoring and a communication interface enable prediction of failures through real-time data accessibility. Photoelectric sensors and inductive sensors are installed along the machinery for part counting, detection and verification and for mould position detection. The UWP 3.0 is a comprehensive web-based monitoring solution to keep track of energy consumption in industrial facilities and to improve the energy efficiency of the installation.
It is essential that plastics processing machines operate without breakdown. When the machine restarts after a breakdown, the material might have to be scrapped: this is typical of blown film extrusion. By using an ultrasonic sensor to check film loop tension, film breakage is prevented and interruptions in the production cycle are minimized. Three ultrasonic sensors are placed round the cylinder of blown plastic film, measuring the diameter of the cylinder, and are used for controlling the air pressure and maintaining a controlled diameter and thickness of the plastic film. The MC36C safety magnetic sensors are designed for an easy installation in safety-related monitoring of swinging, sliding or removable safety guards, even when space is limited. They have a wide actuation range and compact dimensions and are available with integrated cable or M8-plug with a left or right exit connection and optionally LED indicator. If the distance of the bubble surface from the machinery is not controlled, dangerous contacts can occur. Several analogue ultrasonic sensors can be positioned to constantly check the size and the shape of the bubble. The IO-link ICB inductive sensors allow easy exchange of process data, remote configurations and events with simple and inexpensive 3-wire cabling, without needing to change the existing architecture. The ICB series, available from M12 to M30, can be completely configured to enable new functionalities such as the divider and speed control functions. To monitor the ON/OFF switching of groups of the heating elements, DIA53 monitoring relay can be used. This does not need any auxiliary power supply. It is supplied by the measured current, with a built-in current transformer up to 100 A. Furthermore, a CPT power transducer checks the electrical parameters vital for the motor, as a motor running in overload condition can suffer irreparable damage.
In thermoforming processes, heating is a critical phase. The plastic sheet needs to be evenly heated at the right temperature before entering the forming phase; failure to control the heat evenly and precisely results in a poor quality product. Fast switching is necessary to maintain stable processes. This can only be done by solid state relays. A number of solid state relays are typically required to ensure even heating and panel space is often a challenge. The RGC1F offers a compact solution which also integrates fuse protection. This solution provides savings on installation time and costs. Quality and scrap rates can be further improved through timely decisions based on real time data. This is possible with the NRG series that through its communication interface enables the read out of parameters. Inductive sensors placed in the mould, at the end of the pins, can detect whether the mould is properly sealed, enabling the system to start with a new injection process, thus preventing damage to the machinery, as well as improving safety conditions.

The ICS series offer the ideal solution for industrial automation equipment in applications where space is limited. The extended sensing range together with the compact and robust stainless steel housing makes this sensor extremely reliable. The ICS05 with its very high switching frequency up to 6 kHz can be used where fast detection is a must. The variants with on-board IO-Link communication allow advanced sensing performance such as rotational speed monitoring and RPM counter.
Carlo Gavazzi components integrate into auxiliary equipment that is used in combination with plastics machinery, such as plastic dryers and dosing units, as well as stand-alone temperature control units for zone control. Wherever plastic granules are conveyed and processed, capacitive sensors monitor the levels in pipes and in silos or through a viewing window in loaders of injection machines, extruders and blow moulding machinery. Thanks to Tripleshield™ technology, Carlo Gavazzi capacitive sensors are protected against disturbance caused by high ESD of up to 40 kV. Featuring EMC and ESD immunity, Carlo Gavazzi sensors – EC and CA series - detect the level of plastic pellets in the hopper whilst withstanding environmental interference. The sensing face (flush mounted) withstands temperatures up to 120°C.

The new PD30ET photoelectric sensors are ideal for industrial environments and work perfectly even in the harshest conditions. The high-quality stainless steel housing guarantees maximum mechanical resistance. Retroreflective and polarized retroreflective versions are used to check the level of plastic granules in loaders. Additionally, heaters for the drying of the plastic granules can be switched with the RM1A or RGC1A for 1-phase heaters or the RGC2A, RGC3A for 3-phase heaters. The RGC1P, RGC2P and RGC3P series offer the possibility of controlling the switching of the heater with an analog input (0-10 V or 4-20 mA) which can be fed directly to the SSR.

The touch screen BTM series reads the electrical measurement from Carlo Gavazzi energy meters or any other energy meter. It shows the data as instantaneous values and/or depicts it in diagrams.
## Our product range

### RGS1A / RGC1A
- **Product width:** 17.5 mm up to 70 mm, DIN-rail or panel mount
- **Ratings:** up to 660 VAC, 90 AAC, 18000 A 2 s
- **Integrated output overvoltage protection**
- **Control input ranges:** 4-32 VDC, 20-275 VAC (24-190 VDC)
- **Approvals/Marks:** CE - cULus (RGC) - cURus (RGS) - CSA (RGS) - VDE - EAC - GL (RGC up to 30 AAC)

**Main Features**
- Integrated heatsink (RGC1A), without heatsink (RGS1A)
- 100 kA short circuit current rating
- Optional overtemperature protection

### RGS1S / RGC1S
- **Product width:** 17.5 mm up to 70 mm, DIN-rail or panel mount
- **Ratings:** up to 660 VAC, 85 AAC, 18000 A 2 s
- **Integrated output overvoltage protection**
- **Control input range:** 4-32 VDC
- **Approvals/Marks:** CE - cURus (RGS1S) - CSA (RGS1S) - cULus (RGC1S) - EAC

**Main Features**
- Partial load failure detection (1/6)
- Monitoring for SSR and load circuit malfunction
- TEACH by local push button or remote signal

### RAM1A / RM1A
- **Dimensions:** 58.2x44.8x28.8 mm, panel mount
- **Rated operational voltage:** up to 660 VAC
- **Rated current:** 25 AAC, 50 AAC, 75 AAC, 100 AAC, 125 AAC
- **Control input ranges:** 4-32 VDC, 20-280 VAC
- **Approvals/Marks:** CE - cULus - CSA - CCC - EAC - VDE (RAM)

**Main Features**
- Zero cross or Random switching
- Suitable for resistive, inductive or capacitive loads
- Integrated output overvoltage protection (RM)

### RGC2A / RGC3A
- **Product width:** 54 mm up to 70 mm, DIN-rail mount
- **Ratings:** up to 660 VAC, 75 AAC/pole (RGC2A), 65 AAC/pole (RGC3A) @ 40°C
- **Motor ratings:** up to 11 kW @ 400 VAC, 25 HP @ 600 VAC
- **Control input ranges:** 5-32 VDC, 20-275 VAC (24-190 VDC)
- **Approvals/Marks:** CE - cULus - CCC

**Main Features**
- 3-phase; 2-pole (RGC2A) or 3-pole switching (RGC3A)
- Monitoring for SSR and load circuit malfunction (RGC, M)
- 100 kA short circuit current rating

**MAIN FEATURES**
- Tripleshield™ sensor protection
- Dimensions: M30 mm
- Plastic or metal housing, AC versions
- Approvals/Marks: CE - UL - CSA

**EC30**
- High EMC immunity
- Protection: short circuit, transient and reverse polarity
- Easy to use and set up
- Self-learning algorithm to adapt to different loads

**CA18 / CA30**
- Highest EMC immunity
- ESD ratings up to 40 kV
- Sensing face temperature up to 120°C
- Best immunity towards inverters
Our product range

### Capacitive sensors

<table>
<thead>
<tr>
<th>PBT, AISI316L or PTFE with IO-Link</th>
</tr>
</thead>
</table>

#### CA18..IO / CA30..IO
- Sensing distance: 0.5 - 12 mm (M18), 2 - 30 mm (M30)
- Selectable: NPN, PNP, Push-Pull, External Input, N.O. and N.C. output
- IO-Link 1.1 with timer, diagnostics and logic functions
- Approvals/Marks: CE - cULus - ECOLAB

#### MAIN FEATURES
- 4<sup>th</sup> Generation TRIPLESHEILD™ with superior EMC performance
- IP67, IP68 and IP69K
- Diagnostics tools: Quality of Run & Quality of Teach and Alarms
- Housing material: PBT, PTFE or Stainless Steel

### Photoelectric sensors

<table>
<thead>
<tr>
<th>Photoelectric sensors</th>
</tr>
</thead>
</table>

#### PA18
- Dimensions: M18 x 39 mm
- Diffuse reflective sensors, 1 m detecting distance
- Cable or M12 plug versions
- Power supply from 10 to 30 VDC
- Approvals/Marks: CE - cULus

#### MAIN FEATURES
- Sensors used to detect the finished plastic items
- Fast mounting, smooth finish
- Sensitivity adjustment

#### PD30ET
- World standard housing style 11x31.5x21 mm
- Supply voltage: DC 4-wire
- Sensing distance: < 15 m
- Output: NPN/PNP NO+NC
- Sensor types: D, B, R, P and T
- Connectivity: Cable or M8 connectors
- Approvals/Marks: CE - cULus - ECO9AB

#### MAIN FEATURES
- Stainless steel housing AISI 316L
- Resistant to high-pressure washdown, aggressive cleaning agents
- IP67, IP68, IP69K, NEMA type 1, 2, 4, 4x, 5, 6, 6P
- Protection: reverse polarity, short circuit and transients

### Inductive sensors with IO-Link

<table>
<thead>
<tr>
<th>Inductive sensors with IO-Link</th>
</tr>
</thead>
</table>

#### ICS05 / ICS08
- M5 and M8 stainless steel housings
- Sensing distance from 0.8 mm up to 4 mm
- Flush or non-flush (ICS08 only) versions
- M8-plug or cable versions
- Advanced diagnostic functions with indication of short circuit and overload
- IO-Link communication V 1.1

#### MAIN FEATURES
- Configurable output: NO, NC, PNP, NPN, push-pull
- Adjustable switching distance
- Adjustable hysteresis: standard and extended
- Single point, two-point or window mode
- Timer functions: Turn On delay and Turn Off delay
- Temperature alarms

### ICB12 / ICB18 / ICB30
- M12, M18 and M30 long or short barrel nickel-plated brass housings
- Sensing distance from 4 mm up to 22 mm
- Flush or non-flush
- M12-plug or 2 metre cable
- Dual LED user interface for advanced diagnostics
- IO-Link communication V 1.1

#### MAIN FEATURES
- Configurable output: NO, NC, PNP, NPN, push-pull
- Adjustable switching distance: 33%, 50%, 75% and 100% of the maximum Sn
- Adjustable hysteresis: standard and extended
- Single point, two-point or window mode
- Timer functions: Turn On delay and Turn Off delay
- Temperature alarms

### Smart configurator for IO-Link sensors

<table>
<thead>
<tr>
<th>Smart configurator for IO-Link sensors</th>
</tr>
</thead>
</table>

#### SCTL55
- Handheld device for IO-Link sensors
- 5.5” HD touch screen display
- Automatic IODD file download via Wi-Fi
- High capacity rechargeable battery
- M8 3-wire, M8 4-wire and M12 connectors
- Approvals/Marks: CE, FCC
- IO-Link v1.1

#### MAIN FEATURES
- Intuitive GUI with dedicated App for a simplified user experience.
- Access to an advanced diagnostic with the possibility to verify operating hours, number of detections, operating cycles, alarms and quality of run of the sensor connected.
- Easy management of operating parameters such as switchpoint mode, logic and timing functions, sensing distance, output configuration (PNP/NPN/push-pull, NO/NC)

## Energy analyzers

### EM210
- 3-phase energy meters
- Solid or split-core 5 A CT, 333 mV CT, Rogowski coils
- Dimensions: 4 DIN modules or 72x72 housing
- Class 1 (kWh) acc. with EN61036-1
- Class B (kWh) acc. with EN50462-3
- Pulse or serial RS485 output
- cULus approved

### EM24
- 3-phase energy analyzer with direct connection
- Direct connection up to 65 A or by CT
- Dimensions: 4-DIN rail module housings
- Class B (EN50470)
- Pulse open collector output
- Optional serial port (Modbus RS485 or TCP, M-bus wired or wireless and Dupline®), digital input and outputs

### WM20
- 96x96 mm panel mounting housing
- Accuracy 0.2 % (voltage, current)
- Class 0.5S (kWh)
- Universal power supply
- Front protection degree IP65, NEMA4X, NEMA12
- cULus approved

### MAIN FEATURES
- Very compact and space saving meter
- Can be installed both on DIN-rail or on the panel
- MID annex D certification available

### MAIN FEATURES
- Direct measurement in a very compact housing to save space
- Suitable for measuring generated and consumed energy
- On request, MID annex D certification available
- M-bus port integrated in the meter without external gateways

### Monitoring gateway and controller
- Micro PC with embedded Web-Server
- Data and event logging from Modbus, Modbus/TCP and Dupline® devices
- Local gateway functions (to BACNet and Modbus/TCP)
- Remote gateway functions (FTP, STTP, FTPS, Rest-AP)
- Microsoft Azure Certified for IoT
- Huge ecosystem of compatible meters, sensors, actuators

### MAIN FEATURES
- Flexible control functions
- Energy efficiency monitoring
- Building automation control
- Car parking guidance

### MAIN FEATURES
- 4” / 7” colour display
- Easy setup of graphic pages and functions with the powerful Wizard software
- Activation of internet links through touch buttons
- Support viewing from IP cameras

### Power transducers
- 4'' / 7" colour display
- Easy setup of graphic pages and functions with the powerful Wizard software
- Activation of internet links through touch buttons
- Support viewing from IP cameras

### Touch screen/Datalogger
- 96x96 mm panel mounting housing
- Accuracy 0.2 % (voltage, current)
- Class 0.5S (kWh)
- Universal power supply
- Front protection degree IP65, NEMA4X, NEMA12
- cULus approved

### MAIN FEATURES
- Provides installation data to a SCADA to manage the whole system
- Modular housing to build the instrument according to the real application needs
- Modbus, Ethernet, Profinet, BACnet (IP and MS/TP) communication ports

### UWP 3.0
- 3-phase energy meters
- Solid or split-core 5 A CT, 333 mV CT, Rogowski coils
- Dimensions: 4 DIN modules or 72x72 housing
- Class 1 (kWh) acc. with EN61036-1
- Class B (kWh) acc. with EN50462-3
- Pulse or serial RS485 output
- cULus approved

### MAIN FEATURES
- Very compact and space saving meter
- Can be installed both on DIN-rail or on the panel
- MID annex D certification available

### MAIN FEATURES
- Direct measurement in a very compact housing to save space
- Suitable for measuring generated and consumed energy
- On request, MID annex D certification available
- M-bus port integrated in the meter without external gateways

### 3-phase energy analyzers

### 3-phase power analyzers

### 1-phase DIN-rail power supplies

### Metal enclosed power supplies

### Low profile DIN-rail power supplies
### Our product range

#### Compact DIN-rail power supplies

**SPDM**
- **Output power from 30 W to 240 W**
- **Universal input range of 110-240 VAC or up to 370 VDC**
- **Short circuit, overload, overvoltage and over temperature protection**
- **Compact dimensions**
- **Approvals/Marks: CE - cULus - cURus**

**MAIN FEATURES**
- **Save up to 20% panel space**
- **High efficiency and wide operating temperature**
- **Screw or spring terminal connectors**

#### Compact DIN-rail power supplies

**SPDC**
- **Output power: 120 W / 240 W / 480 W**
- **Universal input 90 VAC~264 VAC / 127 VDC~370 VDC**
- **Output voltage: 120 W - 12/24 VDC; 240 W - 24 VDC; 480 W - 24/48 VDC**
- **High efficiency >90%**
- **Approvals/Marks: CE - cULus - cURus**

**MAIN FEATURES**
- **Compact dimensions**
- **150% power boost for up to 3 seconds**
- **In built active-PFC**
- **Parallel connection selection switch**

#### Battery chargers & UPS

**SPUC / SPUBC**
- **Power supply, UPS and battery charger “All-in-one”**
- **Output power: 120 W / 240 W / 480 W**
- **Universal input 90 VAC~264 VAC / 127 VDC~370 VDC**
- **Output voltage: 120 W - 12/24 VDC; 240 W - 24 VDC; 480 W - 24/48 VDC**
- **High efficiency >90%**
- **Approvals/Marks: CE - cULus - cURus - TÜV**

**MAIN FEATURES**
- **Power supply independent from charger (SPUBC), to be used in addition to 12 or 24 V power supply (SPUC)**
- **Remote indication for battery operation and battery low features (SPUBC)**

#### Multifunction safety modules

**CM22D0A / CM40D0A / CM30D1A**
- **Compact dimension, 1 DIN, W x H x D: 18 x 90 x 63 mm.**
- **Safety solution for basic machines, equipment and production lines**
- **4 LEDs on the front panel indicate the status and any errors during operation**
- **Up to 4 OSSD safety outputs**
- **Approvals/Marks: CE - cULus - TÜV**

**MAIN FEATURES**
- **Selectable delay time**
- **Can be used in applications with: e-stop, e-gate, limit switch, non contact switch, safety light curtains, safety light beam and safety mat**
- **Cat.4, PL e (ISO 13849-1), SIL 3 (IEC 62061), SILc3 (IEC 61508)**
- **2 OSSD auxiliary outputs**
- **Selectable manual or automatic start**

**SMS31**
- **Dimensions 110,8 x 17,5 x 121,1 mm DIN-rail housing**
- **Auto, manual or monitored manual start**
- **4 NO safety relay outputs**
- **1 NC auxiliary relay output**
- **Detachable screw terminals**
- **Approvals/Marks: CE - cULus - TÜV**

**MAIN FEATURES**
- **Dual channels simultaneity infinite**
- **Safe monitoring of emergency stops, interlocks, safety magnetic and limit switches**
- **Front LED’s for safety channel diagnosis**
- **PL e as per ISO EN 13849-1**

**SME41**
- **Dimensions 110,8 x 17,5 x 121,1 mm DIN-rail housing**
- **Expansion relays module**
- **4 NO safety relay outputs**
- **1 NC auxiliary relay output**
- **Detachable screw terminals**
- **Approvals/Marks: CE - cULus - TÜV**

**MAIN FEATURES**
- **Extension of safety relay outputs**
- **Operates as expansion unit for master safety relays or OSSD signals**
- **Front LED’s for safety channel diagnosis**
- **PL e as per ISO EN 13849-1 in combination with a master safety module**
## Our product range

### Configurable safety module

- **CMM**
  - 4 non-safety test outputs for sensor monitoring
  - 2 non-safety programmable digital signal outputs
  - 2 non-safety inputs for Start / Restart interlock and EDM
  - LOG file with 5 configuration modifications
  - Connection with other exp. units via rear bus
  - Approvals/Marks: CE - cULus - TÜV

- **ESI**
  - Enhancing safety. Ideal for applications that require access to remain closed and locked until potential hazards have stopped or come to a predetermined safe state.
  - Protecting machines from production interruptions
  - Standards compliance. SIL 3 (IEC 62061), PL e in accordance with EN ISO 13849-1, interlock type 2 in accordance with EN ISO 14119.
  - Approvals by IMQ - CE - cULus.

### Configurable I/O expansion modules

- **C I/O**
  - Wide range of Input/Output, Input only or Output only (both OSSD and standard relay) expansion units to serve different application requirements
  - Models offer a variety of non-safety Inputs/Outputs such as: inputs for Start/Restart interlock and EDM, test outputs
  - Approvals/Marks: CE - cULus - TÜV

- **DDC + CBT**
  - DDC: Expansion unit for Diagnostics and Data Comm.:
    - C PFBUS: Profibus DP
    - C DNET: DeviceNET
    - C CAN: CANOpen
    - C EIP: Ethernet IP
    - C ECAT: EtherCAT
    - C PFNET: PROFINET
    - C OMMS: Universal Serial Bus
  - Bus Transfer: interface module allowing the connection of remote expansions via bus
  - DDC: allows communication with most common industrial fieldbus systems
  - Approvals/Marks: CE - cULus - TÜV

### Data and diagnostic modules + bus transfer

- **Electromagnetic safety interlocks**
  - MAIN FEATURES
    - Also usable as a stand-alone device, able to control any other expansion unit
    - 8 safety digital inputs
    - 2 safety OSSD pairs (400 mA Output)
    - Cat.4, PL e (ISO 13849-1), SIL 3 (IEC 62062), SILc3 (IEC 61508)

- **MAIN FEATURES**
  - Wide range of Input/Output, Input only or Output only (both OSSD and standard relay) expansion units to serve different application requirements
  - Models offer a variety of non-safety Inputs/Outputs such as: inputs for Start/Restart interlock and EDM, test outputs
  - Approvals/Marks: CE - cULus - TÜV

- **MAIN FEATURES**
  - Bus transfer: up to 100 m for each connection. Maximum 5 CBT expansions. Ideal solution for the interconnection of the safety functions of several machines in a production line

- **Configurable I/O expansion modules**
  - MAIN FEATURES
    - The models offer eight combinations:
      - 8 Inputs 2 Outputs; 12 Inputs 8 test Outputs
      - 8 Inputs, 16 Inputs,
      - 2 OSSD, 4 OSSD
      - 2 relay Outputs, 4 relay Outputs

- **DDC + CBT**
  - MAIN FEATURES
    - DDC: Expansion unit for Diagnostics and Data Comm.:
      - C PFBUS: Profibus DP
      - C DNET: DeviceNET
      - C CAN: CANOpen
      - C EIP: Ethernet IP
      - C ECAT: EtherCAT
      - C PFNET: PROFINET
      - C OMMS: Universal Serial Bus
    - Bus Transfer: interface module allowing the connection of remote expansions via bus
    - DDC: allows communication with most common industrial fieldbus systems
    - Approvals/Marks: CE - cULus - TÜV

- **MAIN FEATURES**
  - Bus transfer: up to 100 m for each connection. Maximum 5 CBT expansions. Ideal solution for the interconnection of the safety functions of several machines in a production line
